INTRODUCTION

Wise Wanderer is a mobile application for safety, connectivity and travel planning experience for solo travelers - especially for women. By offering features like Real Time Navigation with alerts, SOS support ,Buddy System, Discover & Assess Safety of Destinations the app ensures user feel secure and connected throughout their journey.

STAKEHOLDER & RESEARCH APPROACH

 Stakeholders:

- **Primary Users:** Solo women travelers
- **Secondary Users:** Emergency Responders
- **Indirect Stakeholders:** Family members

Research Approach:

- **Surveys:** Identify common patterns on travel behaviors, fears, and safety needs.
- **Interviews:** Deeper insights into emotional triggers, safety incidents and app expectations.
- **Personas** were created based on patterns from real responses to get more clarity.

RESEARCH OBJECTIVES

The research objective was to understand the unique challenges faced by solo travelers, especially women, in ensuring safety, connectivity, and confidence during their journeys.

- *Key safety concerns that prevent users from exploring new places alone.*
- *The need for real time assistance features, like SOS activation, live location sharing, and emergency contact alerts.*
- *Explore interest in community features like verified local buddies or community guides.*
- *Preferences for navigation support, safe routing, location-based alerts, and to report or view alerts.*

RESEARCH INSIGHTS AND USER REQUIREMENTS

Research Insights

- **Fear of Isolation** - Many solo travelers feel unsafe when navigating unknown areas alone at night.
- **Emergency Preparedness** - Users desired instant access to emergency support like SOS and location sharing.
- **Poor Access to Real-Time Information:** There was a lack of awareness about nearby safety incidents, verified routes, or local guides.

✓ User Requirements

- *Real-Time Navigation with safety alerts.*
- *Emergency SOS Button with live location sharing.*
- *Trusted Contacts to notify in case of danger.*
- *Buddy System for connecting with nearby verified travelers.*
- *Explore & Search Module to assess and plan trips securely.*

FEATURE LIST

 Emergency SOS

- *Quick SOS activation with a 3-second hold.*
- *Live location shared with emergency contacts.*

Real-Time Navigation with Safety Alerts

- **Route guidance**
- **Reporting Incident and Sharing Location**

 Buddy System / Local Guides

- **Connect with nearby verified travelers.**
- **Search, request, and chat with buddies.**

 **Search & Explore**

- *Discover safe destinations and trip plans.*
- *View reviews, photos, maps, and verified locals.*

Post Trip Feedback

- ***Rate, Review, Report incidents of visited places.***

STORYBOARDS FOR COUPLE OF USE CASES

Use Case 1: Emergency Assistance & SOS

When users feel unsafe, he can trigger SOS by pressing and then hold a button for 3 seconds. This initiates an emergency call and shares the user's live location with their emergency contacts.

Use Case 2: 📍 Real-Time Navigation with Safety Alerts

Users can select a route to their destination and get real-time updates through a live map. Alerts are shown for risky zones, and users can also report incidents or share their live location while navigating.

INFORMATION ARCHITECTURE / TASK FLOWS

The app's structure was designed to provide proper navigation through core features. Each screen and flow was mapped to reflect real user priorities starting from the home screen or sign up page and branching into features like navigation, emergency SOS, buddy system, and trusted contacts. Steps -

- *Quickly access critical features like SOS.*
- *Navigate seamlessly between exploring destinations, connecting with local buddies and managing their safety preferences.*
- *Receive real-time updates and get feedbacks.*
