

USER RESEARCH

Team 14

HMW STATEMENT

"How might we enhance the safety and confidence of solo travelers, especially women, by leveraging technology, community-driven support, and reliable safety infrastructure?"

RESEARCH INSIGHTS

HOW OUR USER RESEARCH SHAPED OUR SAFETY SOLUTION

RESEARCH INSIGHTS

Phase 1 – Survey Insights

- Quantitative insights of solo traveler's demographics, habits, and safety concerns.
- Identified common pain points

Phase 2 – Interview Insights

- In depth, qualitative exploration through open ended questions.
- Captured real life stories and detailed experiences.

RESEARCH INSIGHTS

Phase 1 – Key Findings

- Demographics: Majority of Respondents fall within age 18 to 25 range and above 40+ range.
- Travel Frequency & Destinations: Many solo travellers travel occasionally like around 2 – 4 times a year and some travelling rarely.
- Destination Preferences: Respondents need Urban Destinations and combination with domestic travel.
- Primary Motivation: Leisure or vacation is the leading reason for solo travel.
- Important Features: Features like real-time location sharing and emergency SOS are the most important.
- Community Importance: Community support and trust in user-generated ratings are extremely important in new locations.

RESEARCH INSIGHTS

Phase 2 – Key Findings

- Urban Travel: As per the interview, travellers prefer urban destination with the combination of domestic travels.
- Dependence on Reviews & Peer Feedback: Interviewees heavily rely on reviews, ratings, and recommendations and also highlighted the importance of community generated insights.
- Diverse Digital Tool Usage: As per the interview, frequent solo travellers use variety of digital tools like transaction tools and location sharing and ride hailing apps but occasional travellers rely more on personal judgement and selected trusted platforms.
- Skeptical towards AI: Interviewees preferred human verified feedbacks over AI driven recommendations. AI shouldn't replace personal experiences.

RESEARCH INSIGHTS

Phase 1 – Survey User Needs

- **Reliable Alerts:** Travellers need real-time safety alerts including features like emergency SOS.
- **User-Friendly Tools:** Digital Tools needs to be simple to use and less complexity to learn.
- **Proper Verification:** Travellers need data coming from trusted sources and verify the safety information.
- **Effective Communication:** User needs clear methods to Receive safety alerts during travel.
- **Community Feedback:** System that maintains verified user-generated safety ratings and community support.

Phase 2 – Interview User Needs

- **Trusted and Verified Feedbacks:** Platforms needs to offer accurate, live safety updates, crowdsourced ratings and verified comments.
- **Real Time Alerts:** Alerts should show even during low-connectivity scenarios.
- **Integrated, User-Friendly Tools:** Travellers expects seamless safety solutions which combines features like live location sharing, emergency SOS and easy navigation in a single app.
- **Trusted Community Input:** User needs platforms that contain authentic feedbacks from fellow travellers ensuing safety ratings and recommendations are trustworthy.

RESEARCH INSIGHTS

Phase 1 – Survey User Pain Points

- Safety Concerns – Survey Respondents worry about theft, scams, physical assault, and unsafe transport.
- Negative Experiences: Many Respondents have reported feeling unsafe during travelling.
- Current Solution Limitations: According to Respondents current apps lack robust verification making it less trustworthy.
- Tool Adoption Issues: Few Respondents don't use digital safety tools which indicates awareness gaps.
- Complex Interfaces: Increasing complexity in tools confuses the users and make them hesitate in fully relying on digital safety tools.

Phase 2 – Interview User Pain Points

- Unreliable Safety Indicators: Gaps in real time safety data like driver taking to unknown routes.
- Digital Tools Lack of Information: Digital tools don't fully address all their needs which leads to confusion and having no proper solution.
- Varied Alert Preferences: Some users expressed a need for SMS alerts due to areas with network issues and some users prefer in-app notifications which creates uncertainty about which method would be the most effective during emergencies.
- Lack of Verified Information: While interviewing Users don't rely on AI Generated recommendations but only prefer verified reviews and community feedbacks.

RESEARCH INSIGHTS

User Expectations

- Unified Safety Platform: Users expect a single integrated app that has all features necessary like real-time safety alerts, verified reviews, and emergency services, eliminating the need to switch between multiple tools.
- Reliability: Users need robust system that can even work in challenging network conditions.
- Verified Local Support: Many Interviewees need features like verified reviews and authentic feedbacks as it will enhance their travel confidence.
- Value-Added Premium Features: If offered as a premium solution, advanced functionalities such as offline language translation and direct integration with emergency services and must be affordable then they are willing to pay for better safety.

INSIGHTS & TRENDS

Both phases explored safety concerns, travel challenges, and digital safety solutions for solo travelers, especially women. While the survey provided quantitative trends, the interviews uncovered deeper emotional and experiential insights that were not as visible in the survey results.

- Phase 1 (Survey): 50 respondents (56% men, 42% women)
- Phase 2 (Interviews): 6 in-depth interviews, all women

1. Safety Concerns Shape Travel Decisions
2. Lack of Reliable, Real-Time Safety Info
3. Need for a Multi-Layered Safety Approach
4. Desire for Verified Support Networks

INSIGHTS & TRENDS

Gender Differences in Survey Responses- Phase 1

● Women's Concerns:

- Personal safety, harassment, and physical security were top fears.
- Preferred women-only transport, trusted local networks, and verified accommodations.
- Less trust in AI-driven solutions—favored human verification & community support.

● Men's Concerns:

- Financial security (scams, fraud, theft) ranked higher than personal safety.
- More inclined toward community-based safety ratings over government integration.
- Open to AI-driven safety solutions but saw them as optional rather than essential.

Impact of all women in interviews- Phase 2

- Women shared direct experiences of harassment & transport risks.
- Personal safety was a recurring and urgent theme.
- Rejection of Over-Reliance on AI
- Preferred human-verified safety networks & faster emergency response.
- Demanded proactive safety alerts over self-reporting tools.

USER JOURNEY MAP

A User Journey Map (UJM) is a detailed visualization of a user’s experience with a product, service, or system, broken down into different stages of interaction. It captures the user’s actions, emotions, pain points, and touchpoints across the journey, helping to understand their needs, expectations, and frustrations at each step. We have made a generalised UJM of a solo female traveller irrespective of her user persona:

Stage	Awareness	Consideration	Planning & Booking	Travel & Navigation	On-Trip Experience	Post Experience
User Actions	Thinks about safety risks while planning travel.	Researches destinations, checks safety ratings & tips.	Books accommodation , transport, and safety tools.	Uses navigation apps, stays alert to surroundings.	Engages in activities while monitoring safety.	Shares experiences, safety feedback online.
Thoughts & Feelings	"Is this destination safe for solo travel?"	"I need reliable safety info before making decisions."	"I hope my accommodation and transport are secure."	"Am I being followed? Is this cab safe?"	"I want to enjoy, but I must stay cautious."	"Should I warn others about this place?"
Touch Points	Travel forums, social media, word-of-mouth.	Safety apps, government advisories, reviews.	Booking platforms, safety tool apps, GPS tracking.	Maps, ride-sharing apps, emergency contacts.	Local guides, buddy systems, safety check-ins.	Travel groups, safety rating platforms.
Pain Points	Lack of reliable, real-time safety information.	AI safety ratings feel generic, not tailored.	Booking sites lack verified security details.	Unreliable public transport & cab safety.	Safety concerns in public spaces, scams.	No follow-up from safety platforms.

User Journey Map

UJM - Minimalist, Budget-Conscious Traveler

(Focus: Affordable safety solutions, balancing cost and security.)

Stage	Awareness	Consideration	Booking & Preparation	During Travel	Post-Experience
User Actions	Thinks about budget travel, safety concerns, and solo trip feasibility.	Searches for affordable yet safe stays & transport options.	Books verified budget accommodation , checks forums for safety tips.	Uses public transport , avoids risky areas, shares location with family.	Shares experience, warns others about unsafe spots, looks for rewards or discounts.
Thoughts & Feelings	"I need to keep costs low but stay safe."	"Are there any cheap but reliable hostels or homestays?"	"I hope my stay and transport are safe despite the low cost. "	"I should avoid unsafe areas. Is public transport reliable at night?"	"Did I save money without compromising safety? "
Touch Points	Budget travel blogs, word-of-mouth, hostel reviews, forums.	Safety-rated budget stays, travel forums, ride-sharing options.	Discount travel apps, local safety ratings, community recommendations.	Public transport apps, free safety tools (GPS, SOS features, travel buddy options).	Community forums, travel groups, review platforms.
Pain Points	Limited affordable verified stays , uncertainty in choosing safe transport.	Few budget-friendly safety solutions , unreliable safety ratings.	No easy way to verify the safety of cheaper transport/accommodations.	Public transport delays, unresponsive emergency services.	Lack of post-travel engagement , safety platforms not optimized for budget users.

UJM - Tech Enthusiast, Full-Feature User

(Focus: AI-powered, data-driven safety features.)

Stage	Awareness	Consideration	Booking & Preparation	During Travel	Post-Experience
User Actions	Researches AI-powered safety apps , compares features.	Reads reviews on AI safety tools, real-time tracking apps, and scam alerts.	Integrates travel with smart apps, sets up emergency contacts.	Uses AI-based risk alerts, live location tracking, and scam detection tools.	Gives feedback on AI tool accuracy, suggests improvements.
Thoughts & Feelings	"I want the best technology-driven safety solutions."	"Does this app provide real-time risk assessment? "	"I hope the AI is reliable and adapts to my needs."	"Will AI-generated safety alerts be accurate and timely?"	"Did the AI tool actually enhance my safety?"
Touch Points	AI safety blogs, premium travel safety apps, user reviews.	App trials, feature comparison sites, cybersecurity insights.	Predictive AI risk assessment tools, automated safety checks.	Real-time crime maps, AI-generated safe route suggestions, emergency response automation.	App feedback loops, community forums, software updates.
Pain Points	High cost of premium AI safety tools, concerns about privacy and tracking.	AI-generated recommendations are too generic , lack local insights.	Complex setup for AI-powered safety features.	Over-reliance on AI, inaccurate real-time updates.	Limited AI adaptation based on actual user experiences.

User Journey Map

UJM - Community & Information Driver

(Focus: Community-driven safety, crowdsourced data.)

Stage	Awareness	Consideration	Booking & Preparation	During Travel	Post-Experience
User Actions	Searches for community-verified safety insights .	Participates in female travel groups, social safety discussions .	Books accommodation s based on community reviews .	Shares real-time safety updates, crowdsources risk alerts.	Reviews safety measures, contributes to safety forums.
Thoughts & Feelings	"I trust real traveler experiences over AI ratings."	"Do others recommend this location for solo female travelers ?"	"I hope the community-verified recommendations are reliable."	"I should contribute to the community by warning others about risks ."	"Did my experience help future travelers make safer choices ?"
Touch Points	Travel groups, social safety forums, peer-reviewed safety apps.	Community ratings, women-led travel platforms .	Verified local guides , group safety features, forum discussions.	Live community alerts, shared safety experiences .	Travel feedback groups, safety trend discussions .
Pain Points	Limited availability of community-driven safety platforms .	Misinformation , fake reviews, lack of verified data .	Few structured ways to share safety insights , lack of real-time updates .	Slow information updates , community safety data isn't always real-time.	Not enough engagement or post-travel safety impact tracking .

UJM - Cautious, Policing/Authority Integration

(Focus: Verified safety measures, law enforcement collaboration.)

Stage	Awareness	Consideration	Booking & Preparation	During Travel	Post-Experience
User Actions	Looks for government-approved travel safety guidelines.	Checks police-verified accommodation s, safe transport listings.	Registers travel plans with embassies, downloads police-recommended safety apps.	Uses official travel safety services , reports incidents to authorities.	Files safety feedback with authorities, suggests improvements.
Thoughts & Feelings	"I want officially verified safety measures."	"Is this stay or transport option police-vetted ?"	"I hope law enforcement is accessible if needed."	"How do I report safety concerns quickly and effectively ?"	"Did authorities take real action based on safety reports ?"
Touch Points	Government travel advisories, embassy alerts, police-vetted safety apps.	Verified accommodation listings, local safety audits .	Embassy registration portals, law enforcement databases .	Emergency response centers, verified women-only transport .	Government safety forums, police report follow-ups.
Pain Points	Lack of government-verified safety solutions , difficulty accessing real-time law enforcement updates.	Limited coordination between law enforcement and digital safety tools .	Emergency services are slow or unresponsive in many locations.	Difficulty in quickly reporting or escalating safety incidents.	Lack of response from authorities , safety reports often ignored.

FEATURE RECOMMENDATION

Here, we have some concerns, features and statistics to support them as in what share of users want which kind of feature.

FEATURE RECOMMENDATION

Here, we have some concerns, features and statistics to support them as in what share of users want which kind of feature.

What features do you find most useful in a travel safety app?

58 responses

What features would you like to see in an ideal travel safety platform?

58 responses

<u>Pain Points</u>	<u>User Expectations/Needs</u>	<u>Solution / Recommendation</u>
Safety Concerns	Quick emergency response and reliable safety measures.	- Smart SOS Button: One-touch emergency support with live tracking. - Verified Transport & Stay: Police-verified accommodations and women-only transport. - AI Route Safety: AI-powered route planning to avoid unsafe areas.
Lack of Reliable Safety Information	Trustworthy, real-time safety insights.	- Crowdsourced Safety Ratings: User-reported safety scores for locations. - AI Risk Alerts: Predictive analysis for potential safety threats. - Anonymous Incident Reporting: Enables users to report safety concerns discreetly.
Social & Psychological Discomfort	Support networks and trusted local connections.	- Local Travel Buddy Matching: Connects solo travelers with vetted companions. -- Women-Only Guides & Groups: Verified female guides for safer exploration. - AI-Personalized Safe Itineraries: Suggests secure routes and locations based on user preferences.
Emergency Services Are Slow/Inefficient	Faster and more efficient emergency response.	- Instant SOS Alerts: Direct integration with local authorities and verified responders. - Real-Time Location Sharing: Auto-alerts contacts when entering high-risk zones.
Digital & Cybersecurity Risks	Protection from online scams, tracking, and harassment.	- Encrypted Location Sharing: Keeps personal data private while ensuring safety. - AI Scam Detection: Identifies fraudulent bookings and fake reviews. - Safe Browsing Mode: Prevents tracking and cyber threats.

FEATURE RECOMMENDATION

Some **additional features** that can be implemented:

- Women-Only Accommodation & Transport Listings – Verified safety ratings by users.
- Verified Travel Companion Feature – Matches solo travelers with trusted co-travelers.
- Multilingual Safety Alerts – Automatic translations for local emergency updates
- Offline Mode for Safety Features – SOS, safety guides, and maps available without the internet.

Certain features can be implemented to **enhance the overall experience of the user**–

- Custom Safety Profiles – Users can set preferences (e.g., minimal alerts, high-security mode).
- AI-Based Personalized Recommendations – Suggests best safety features based on travel habits.
- Privacy-Focused Location Sharing – Users control who sees their location and for how long.
- Gamified Safety Awareness – Reward system for sharing safety reports or checking in.
- Minimalist UI for Quick Actions – Reduces cognitive load in high-stress moments.

JOB TO-BE DONE FRAMEWORK

More user centric approach

Aligns With Real-World Travel Scenario

Safety isn't a single pain point but a continuous need

1. Pre-Travel Planning & Risk Assessment

JTBD Statement	Pain Points	User Needs/Gains	Feature Recommendation
When I plan a trip, I want to check safety ratings of different areas so that I can choose safer locations to stay and explore.	Lack of reliable, location-specific safety data; difficulty identifying high-risk areas.	Trustworthy, real-time safety ratings based on community insights and official data.	AI-powered safety heatmaps & crowdsourced location safety ratings.
When I book an accommodation, I want verified safety reviews so that I can trust my stay will be secure.	Fear of unsafe accommodations, lack of verified safety info.	Police-verified stays & community-based safety reviews.	"Verified Safe Stay" label for accommodations.
When I prepare for my trip, I want safety tips based on my destination so that I feel prepared for local risks.	Unawareness of local safety concerns, scams, or cultural risks.	Personalized travel safety briefings.	AI-driven travel safety insights before departure.

2. Safe Navigation & Transit

JTBD Statement	Pain Points	User Needs/Gains	Feature Recommendation
When I take a taxi alone, I want real-time trip monitoring so that someone is aware of my route in case of an emergency.	Unreliable cab services, risk of unsafe routes, lack of accountability.	Auto-tracking, trusted contacts alerted if route deviates.	Live trip tracking with emergency deviation alerts.
When I walk in an unknown area, I want route recommendations based on safety so that I avoid dangerous streets.	Unsafe public spaces, walking alone at night, unfamiliarity with surroundings.	AI-powered navigation that prioritizes safety.	Smart route planning that avoids high-risk areas.
When I feel unsafe in transit, I want quick access to emergency help so that I can immediately call for assistance.	Slow emergency response, difficulty reaching authorities.	Fast and reliable emergency support.	One-touch SOS button integrated with police/emergency services.

3. Real-Time Safety & Emergency Support

JTBD Statement	Pain Points	User Needs/Gains	Feature Recommendation
When I enter a new place, I want real-time alerts about unsafe areas so that I can make informed decisions.	No instant updates on potential safety risks.	Live alerts about changing safety conditions.	Push notifications for nearby safety risks.
When I feel unsafe, I want an easy way to notify my trusted contacts so that I know someone is aware of my situation.	No quick way to notify family or friends.	Auto-alert system for emergencies.	Periodic safety check-ins & distress alerts.
When I face an emergency, I want a way to contact police quickly so that I don't lose time seeking help.	Slow emergency response, difficulty navigating emergency numbers.	Instant contact with authorities.	Direct emergency call integration with local police/hotline.

How important is community support for your solo travel safety?

58 responses

Would you use a platform that connects solo travelers with verified local guides or buddy travelers?

58 responses

4. Community-Based Safety & Support

JTBD Statement	Pain Points	User Needs/Gains	Feature Recommendation
When I travel alone, I want to connect with other verified travelers so that I feel more secure.	Feeling isolated, lacking support network.	Verified community connections.	Trusted travel buddy or local female guide feature.
When I experience a safety issue, I want to report it anonymously so that others can be warned.	Lack of real-time incident reporting.	User-driven safety insights.	Anonymous incident reporting system.
When I visit a new place, I want to read community safety reviews so that I can plan accordingly.	No way to access real experiences from other travelers.	Peer-verified safety insights.	User-generated safety ratings & reviews.

5. Digital & Cyber Safety

JTBD Statement	Pain Points	User Needs/Gains	Feature Recommendation
When I use online travel services, I want to protect my personal data so that I avoid digital threats.	Cyber harassment, identity theft risks.	Strong privacy features.	Built-in VPN or secure browsing in the app.
When I share my location, I want control over who can see it so that I feel safe.	Fear of digital tracking & data misuse.	Secure, customizable location sharing.	End-to-end encrypted location sharing.
When I join a travel community, I want verification so that I interact with trusted users.	Risk of interacting with scammers.	Verified profiles & trusted community connections.	User verification & rating system.

CONCLUSION

The Jobs-To-Be-Done (JTBD) framework ensures that the proposed features directly address the real safety concerns of solo travelers, particularly women. By focusing on practical, user-driven solutions, the product creates a comprehensive safety ecosystem that spans trip planning, navigation, emergency support, and digital security. Integrating real-time alerts, AI-driven risk analysis, and verified community networks enhances trust and usability. This approach not only improves user adoption but also empowers travelers with reliable information and immediate support, ultimately making solo travel safer and more accessible.
