Home Page of App

Explore & Search – Use Case 4 - Discover & Assess Safety of Destinations which navigates into destination's detail page.

Real Time Navigation – Use Case 7 - opening the map view where you select source/destination, choose routes, share location and report incidents.

Travel & Booking – Use Case 5 – Provides user buddy system where user can chat with friends, add connections and search other users.

Trusted Contacts – Use Case 2 - Showing list of contacts, can add, edit, and set permissions for who sees your live location.

Emergency SOS – Use Case 6 - the large red prominent SOS button screen and countdown screen for holding and triggering an immediate help call.

Navigation Bar

Home Icon – Returns to Home Page

Search Icon – Explore and Search {Use Case 4}

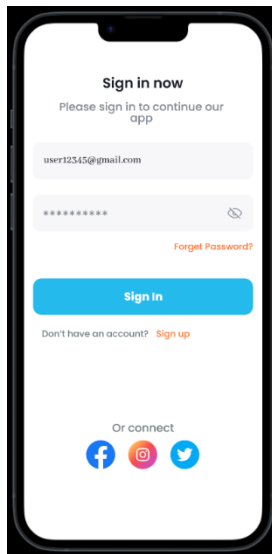

Navigate Icon - Real Time Navigation {Use Case 7}

SOS Icon - Emergency SOS {Use Case 6}

Messages Icon – Buddy System {Use Case 5}

Profile Icon – Opens Profile & Emergency Info {Use Case 1}

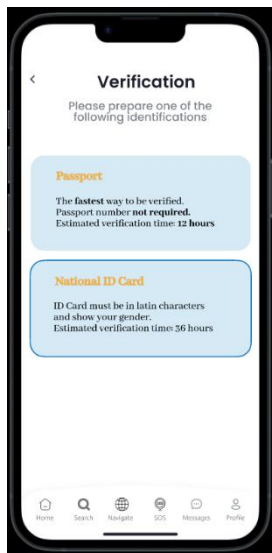

Use Case 1 - Customise the profile and add emergency info

Sign in – Allows user to login and user can move to Home Page

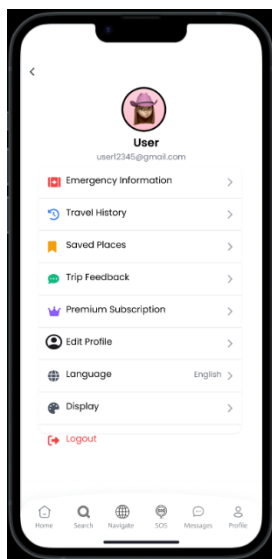

Forgot Password will ask user to enter email for OTP, user will confirm the OTP and move to Home Page.

Sign Up – Similar page but forgot password will not be visible and User after sign up will be asked to verify himself.

After sign up user will be asked to verify himself. Click Passport or National ID Card which navigates to a screen that displays scan image.

By clicking “Take a Selfie” user will move to Home Page.

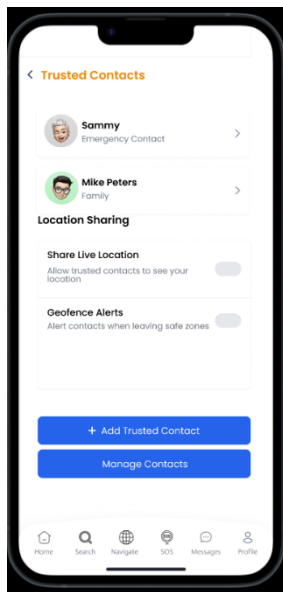

By tapping profile icon in navbar user can open his profile. User can click Emergency Information / Travel History / Trip Feedback / Edit Profile / Logout.

Selecting Emergency Information opens dedicated form for entering emergency contacts, medical conditions, and instructions. After filling all the details the app confirms it.

Selecting Edit button brings up Personal Details form where user can enter name, email address, phone number and home address. User can save these details.

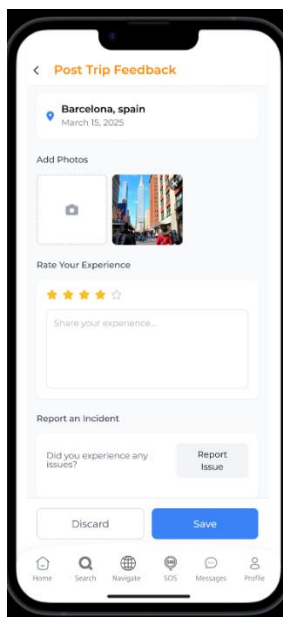

Use Case 2: Trusted Contacts Management

From Home page user clicks Trusted Contacts to add new contacts. User can click Mike Peters to toggle share live location permissions and remove contacts.

User can Add Trusted Contact which ask for contact details.

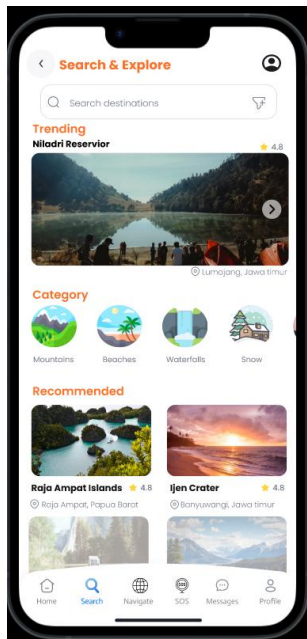

Use Case 3: Post Trip Feedback

User can add Trip Feedbacks just by clicking profile icon in navbar and then from profile User will select Post Trip Feedbacks which shows List of Trips.

User can click eg. Barcelona Spain to redirect towards a screen containing Feedback form. By submitting or cancelling user will be redirected to List of Trips.

Use Case 4: Discover & Assess Safety of Destinations

User can click Search icon from navbar or Search and Explore card from Home Screen to navigate to main screen of Discover & Assess Safety of Destinations.

User can click Trending image which will redirect the user to that particular Place Details. User can also click Category eg. Mountain which redirects to category Mountain page similar to main page of Discover & Assess Safety of Destinations. User can click eg. Niladri Reservoir which also redirects to that particular Place Details.

Place Detail page shows tabs About/Review/Photo/Location that allows user to switch content in the same page.

In about - user can check description of the place.

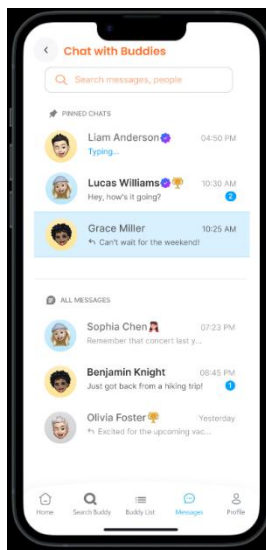

In Review - user can see reviews and ratings from other user.

In Photo - user can scroll through all images present in gallery.

In Location/Map - user can easily find locations of nearby Hotels, Banks, Restaurants, Malls by switching content in the same map.

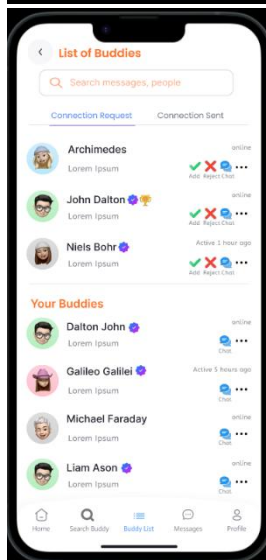

User can press search icon or back button at top left to go back.

Use Case 5: Buddy System

By clicking message icon in navbar or by clicking travel & booking card in home page user can navigate to chat with buddies page.

User can click his friends row Grace Miller to check messages and chat with him. User can use dynamic navbar to navigate between buddy list and search buddy. In search buddy many randoms users will be displayed with short bio. User can send friend request and can tap filter tabs to narrow choices.

User can navigate to list of buddies and can switch content between connection request and connection sent. Incoming requests appear under the Connection Requests tab, where the user taps ✓ to accept or ✗ to reject request. Accepted users move into the Your Buddies list

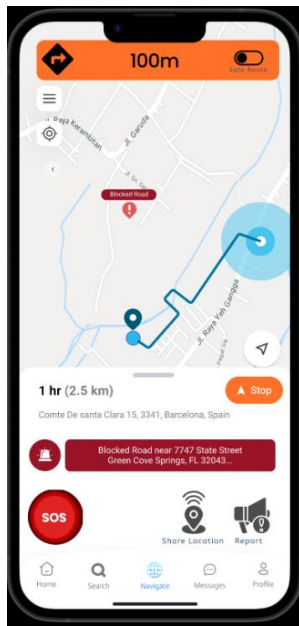

Use Case 6: Emergency Assistance & SOS

Tapping the SOS icon in navbar, Emergency SOS card in home page, or any prominent Red Button which has SOS labelled will open this screen. The user is expected to hold large red SOS button for 3 seconds to navigate to Emergency Call Initiated screen. Cancel button allows user to stop this screen and navigate to home page.

After the call ends, the app returns to Home and displays a notification “Help is on the way”

Use Case 7: Real-Time Navigation with Safety Alerts

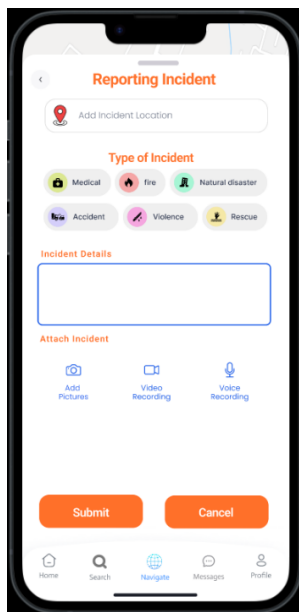

By tapping Real-Time Navigation card from Home Page or Globe icon from navbar user enters the Map Setup screen.

User can tap parallel line icon to get source and destination text box which also pops up a window containing various locations. User can click the source or destination text box again to get into full screen source and destination screen.

User can share locations by clicking share locations map icon which pops up window with duration of sharing location and message then location list then contact list.

User can report incident by clicking Report Icon which redirects to share incident screen.

User can press Red SOS button to redirect to emergency SOS screen

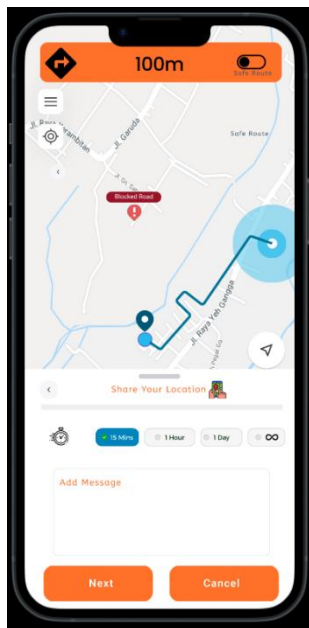

Reporting Incident -

User after clicking Report Icon can report any type of incident.

User can attach incident details which shows attached files below.

User gets confirmation and thanks message from response of app.

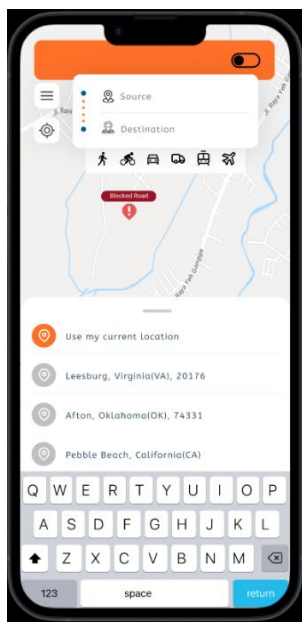

If the user incident reporting is correct {if many users shared the same or found source that its correct} alert will be displayed on screen and on map point of location.

User after clicking share location icon he will get pop up window asking for duration tabs and add message.

After clicking next will allow user to choose which nearby location he wants to share.

After clicking next user will get list of emergency contacts that he entered in use case 1 - emergency information. User can multi select or select all users and can share the location.

After clicking start button or 3 dot lines user will get many pop ups.

Source and Destinations Text Box , Current Location with List of locations near the user. If user taps Source or Destination again it will allow user to full screen which includes both source and destination.

After entering source and destination user will be displayed with list of routes each route showing ETA, distance, and safety. User can select any route he prefers and after this navigation will start.
